CYBER RISKS AND POTENTIAL RISKS FROM ARTIFICIAL INTELLIGENCE

Max joined Gallagher in 2016 and has wholesale insurance experience with the company in several regions, including the United States, the United Kingdom, and the Caribbean. He is a Chartered Property Casualty Underwriter (CPCU) and holds a BSc from Davidson College.

At Gallagher Caribbean, Max heads the wholesale and reinsurance division known as IIBRe. The IIBRe team specializes in addressing local capacity gaps and providing coverages not readily available in the region.

One of Max's core specialties is Cyber Insurance and Cyber Risk Management. Since joining the Gallagher Caribbean team, he has dedicated his efforts to help clients identify cyber exposures, quantify cyber risk, navigate cybersecurity controls and negotiate complex cyber insurance policies.

Max has experience spanning various industries with companies of all sizes. His clients have ranged from Fortune 1000 companies to intricate Small and Mid-size Enterprises.

As Cybersecurity CTO of Caribbean Solutions Lab, Sean's mission is to make the world a safer place, one Caribbean organization at a time. His focus is on the critical infrastructure SMEs of the English and Dutch Caribbean, with a particular emphasis on leveraging Threat Intelligence to enhance protection for the greater Community.

Based in the Cayman Islands since 1998, Sean shifted from IT to full-time cybersecurity in 2007 and never looked back. Over the years he has filled numerous roles including instructor, enterprise security architect, professional services, incident response, and pre/post sales support. He has presented at regional STEM conferences, schools/PTAs, and led technical, deep dive sessions and user groups at security conferences in Las Vegas.

Starting formally in 2012, Caribbean Solutions Lab, remains a pure-play cybersecurity company and has evolved from the traditional reseller model, with attached professional services and training, towards a service-centric model, with solutions tailored to each customer.
